

The 23rd IEEE International Conference on
Intelligent Transportation Systems

Workshop title: Self-awareness Advances in Heterogeneous Autonomous Systems

Description of the workshop: The purpose of this workshop is to gather a group of active researchers in the area of intelligent transportation systems, signal processing, artificial intelligence, and autonomous driving vehicles in the same virtual room and discuss their most recent research results. The workshop has been organized as a webinar with a Q&A round where all participants will have the opportunity to contribute and discuss the actual issues and future trends of this topic. Prof. David Martín Gómez from Intelligent Systems Lab at Carlos III University of Madrid is going to present the webinar titled “Self-awareness in Autonomous Vehicles: from environment understanding to autonomous decision-making capabilities”.
